Design

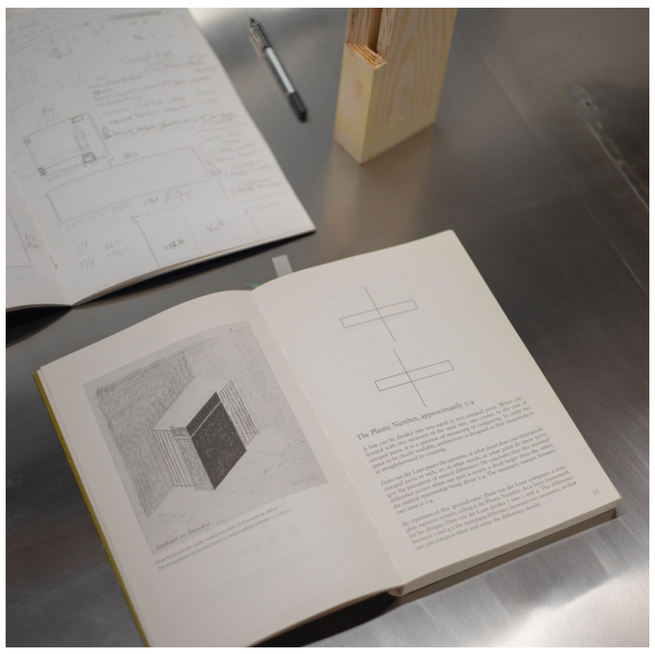

''Good design is as little design as possible, less, but better.''
Dieter Rams

We design with the belief that the basis is already there with a reason. We start with a research of the already existing and translate those good aspects into a new concept that fits with the norms and values of the moment. We design with as little impact as possible and bring back the essence of the question.

With the focus on researching existing techniques and manufacturing methods, designing based on embodied knowledge and producing with the standards and values of the moment we create our own aesthetic identity and philosofhy.

Manufacturing

''Man as maker, how can we use technology well to think like makers?''
Richard Sennett

Learning to understand a technique is the beginning of a structure. A structure is the beginning of an object. An object is the beginning of a space. A space is the beginning of a society. So to speak, the chain starts with knowledge about techniques and manufacturing methods, the structure.

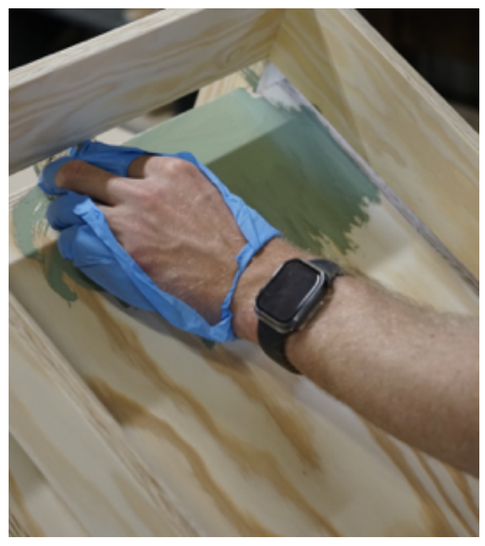

Structural-aspect focuses also on the manufacturing method. The interdisciplinary expertise leads to various tracks in technology and design domains, such as architecture, design, woodworking and metalworking. During our career, interests will shift to other disciplines in order to learn more from what already exists and apply it in new concepts.

We agree that the products we live with, and use every day, play an important role in our well-being. Our added value is within the local production, respect for the material and the production process and possibilities. Make the chain as little as possible.

Exhibitions

Dutch Design Week, Piet Hein Eek, Eindhoven 2023

Expo, Galerie Zone, Leiden 2023

Object, HAKA-gebouw, Rotterdam 2024

Milan Design Week, Isola district, Milaan 2024

Design Fair Nieuw Instituur, Rotterdam 2024

Dutch Design Week, Finished Forms, Eindhoven 2024
